

1600 Terminals

The next generation deskphone

Flexible Communications

1600 IP Terminals - a unique communications experience

The 1600 series IP terminals provide a cost effective solution designed to drive increased productivity by enhancing the user experience. Featuring an intuitive user interface, the 1600 series IP terminals allow users to proficiently and confidently perform common telephony tasks.

The right solution for your business

The 1600 series offer businesses a wide choice of terminals, which suit a range of different user profiles. Matching the communication needs of the user and the terminals on their desks provides great business benefits.

Enhance employee productivity...

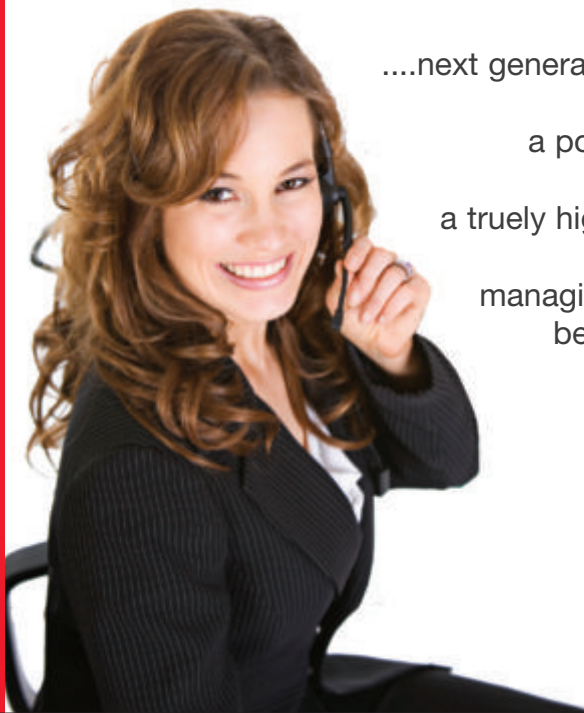

The 1600 terminals have been designed to make communication functions easier and quicker to accomplish. Increased call control and call management capabilities are achieved via the intuitive user interface which can significantly help to improve user efficiency. The 1600 terminals include all the productivity enhancing features normally only associated with high end, more expensive terminals.

Investment Protection

The design of the 1600 series terminals provides an open standards adapter to support a range of additional modules. This ensures investment is protected for enhanced capabilities as needed in the future. For example, an external gigabit ethernet adaptor allows you to connect to a PC enabling high speed connection to applications on your network. Alternatively, the 32 button expansion module for the 1616 terminal can be customised to fulfill a wide range of specific user needs.

Cost effective IP telephony solution

With features and capabilities generally not found in similar priced IP terminals, the 1600 series are an ideal choice for businesses seeking an easy, cost effective transition to IP telephony. The high quality design and excellent reliability of the 1600 terminals provides a long return on your investment and lowers your total cost of ownership.
