

## 5000 series handsets

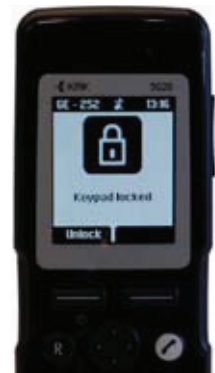

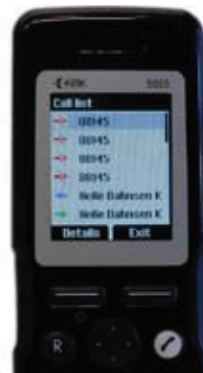

Compared with many other business DECT handsets the 5000 series offers an enlarged feature set and a small physical profile. It combines the features of the 4000 series handsets with a large colour display, an intuitive user interface, and some new and updated features to produce a range of handsets which meets the demands of today's modern work place.

The handsets are elegant and lightweight but keep the traditional values of ruggedness and reliability for which KIRK handsets are known and highly regarded. They are built to the same standard as the KIRK 4000 series handsets and are subject to the same rigorous testing including the drop and stress tests. The design has been led by the need for a sturdy elegant handset which can provide:

- Large colour display
- Optional text messaging capability
- 10 ring tones,
- 250 number telephone book
- Speech time of 20 hours (5020 only)
- Stand by time of 200 hours (5020 only)
- 40 entry list of incoming/missed/received calls
- Redial from call list
- Convenient sized design (146x48x19mm : 110g)

The interface is intuitive and uses icons and text

**5020****5040**

The 5000 series handsets offer an alternative style to the popular 4000 series handsets. The large colour display with an icon and text based menu make them ideal for the employees who don't need the IP classification or ATEX/IEC rating of the 4040/4080 handsets.
