

## 5020 Handset

Compared with many other business DECT handsets the 5020 offers an enlarged feature set and a small physical profile. It combines the features of the 4000 series handsets with a large colour display, an intuitive user interface, and some new and updated features to produce a handset which meets the demands of today's modern work place.

The handset is elegant and lightweight but keeps the traditional values of ruggedness and reliability for which KIRK handsets are known and highly regarded. It is built to the same standard as the KIRK 4000 series handsets and is subject to the same rigorous testing including the drop and stress tests. The design has been led by the need for a sturdy elegant handset which can provide:

- Large TFT colour display
- Optional text messaging capability
- 10 ring tones,
- 250 number telephone book
- Speech time of 20 hours
- Stand by time of 200 hours
- 40 entry list of incoming/missed/received calls
- Redial from call list
- Convenient sized design (146x48x19mm : 110g)

The interface is intuitive and uses icons and text

### 5020

The 5020 offers an alternative style to the popular 4000 series handsets. The large colour display with an icon and text based menu make it ideal for the employees who want an option to the entry level 4020 but don't need the IP classification or ATEX/IEC rating of the 4040 or 4080 handsets.

	5020	4020	4040	4080
