

## 4000 Series Handsets

There are three models in the range. The 4020 is a robust phone for the demanding work place. The 4040 is ideal for manufacturing, warehousing and environments where moisture or dust may be a problem. The 4080 is designed for chemical plants, powder silos and anywhere there is a risk of explosion.

The handsets are stylish but robust. If dropped they are weighted to fall on a strong rounded end. Inside, the single circuit board construction means that the electronics can withstand the effects of most drops. A rubber edge surrounds the phones which helps protect them further.

All handsets feature:

- Large clear display
- Optional text messaging capability
- 9 ring tones,
- 10 menu languages
- 200 number telephone book
- Speech time of 16 hours
- Stand by time of 150 hours
- Last 10 numbers redial
- Convenient sized design (148x50x28mm : 130g)

The 4040 and 4080 handsets allow for improved freedom of use by including loudspeaker/hands free operation, vibration and a headset socket. The 4040 has achieved the IP54 rating. The 4080 meets the IP classification at level IP64 and is ATEX and IEC approved as intrinsically safe.

**4020**

The 4020 handset is the entry level phone from the 4000 series robust range. It is built for long-term dependability and provides workplace mobility in a robust but stylish package

**4040**

The 4040 handset is designed for workplace environments where dust and splashing water may be a problem. Additionally, for employees who require extra freedom of use the handset provides loudspeaker/hands free operation, vibration and a headset socket.

**4080**

The 4080 is the handset for those workplace environments where special conditions and regulations apply and where a conventional handset might cause an explosion. The handset allows the same freedom of use as the 4040 with loudspeaker/hands free operation, vibration and a headset socket
